About

I'm a design-focused full-stack engineer who enjoys building thoughtful, well-crafted products. I love working at the intersection of product, design, and engineering to create user experiences that are intuitive, performant, and reliable. I believe in shipping early, listening closely, and refining based on feedback from users and peers.

Professional Experience

Leap Wallet   Sept 2022 - Dec 2024
Full-stack Engineer, Remote

- **Userbase Growth:** Revamped and optimized core features in the wallet, increasing weekly active users by 400% in collaboration with design and marketing teams.
- **Revenue Impact:** Built SDKs, core libraries, and services that enabled monetization of Leap Wallet and SwapFast, generating around $3M in monthly swap volume.
- **UI/UX Enhancement:** Initiated the development of a design system for the product suite and internal tools, ensuring a consistent, cohesive, accessible, and high-quality user experience.
- **Performance Optimization:** Engineered critical performance optimizations that reduced Time to Interactive (TTI) by 59% (6.8s to 2.8s) for SwapFast, significantly improving UX and increasing conversion rates.
- **Application Reliability:** Set up Sentry for error monitoring, reducing turnaround time for bug fixes and cutting app crashes by 60% within two months.
- **Engineering Improvements:** Led documentation for internal libraries and SDKs, optimized CI/CD pipelines, and improved build tooling (achieving up to 10× faster build times).

CryptoCapable   Feb 2022 - June 2022
Full-stack Engineer, Remote

- **Project Lead:** Led the development and launch of a gamified education platform for the NEAR ecosystem as a Decentralized Autonomous Organization (DAO) in three months.
- **Product Development:** Helped design and develop a full-stack Next.js application and smart contracts for the DAO, focusing on user delight, accessibility, security, and performance.
- **Technical Documentation:** Created and maintained comprehensive documentation, including a detailed development wiki, to enhance team collaboration and accelerate project timelines.

Turtlewig   Dec 2020 - Feb 2021, May 2021 - July 2021
Full-stack Intern, Remote

- **Product Development:** Contributed to a content delivery platform for digital creators by implementing key features such as collaborative reviews, version control, access control, and magic invite links.
- **Application Robustness:** Resolved critical engineering challenges, such as race conditions in the asset processing pipeline by designing resilient cloud-based solutions, significantly improving platform reliability.
- **Engineering Optimizations:** Improved application performance in key areas by up to 46% and reduced technical debt by refactoring core sub-modules.

Skills

- HTML, CSS
- JavaScript
- TypeScript
- Node.js
- Golang

- React.js
- Next.js
- Tailwind CSS
- Styled Components
- Redux, Zustand

- Express, Hono
- REST, GraphQL
- PostgreSQL
- Redis
- ClickHouse

- Sentry
- AWS
- Mixpanel
- PostHog
- Docker

Tools
- Figma
- GitHub
- Linear
- Notion

Education

B. Tech in Computer Science
8.3 CGPA · Shiv Nadar University, Noida

Higher Secondary Certificate
98.2% · Atmiya Vidya Mandir, Surat
